*Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, 31-33, and 35. Claims 1-2, 4-24, 31, 33 and 35 are drawn to a process for producing a rod lens array, classified in class 359, subclass 652. Claims 3 and 32 are being grouped together with the previous claims because the rod lens array is obtainable by the process of claim 1 and could be searched together with the other claims without any undue burden on the examiner.
- II. Claim 25 is, drawn to a rod lens, classified in class 359, subclass 642.
- III. Claims 26-30 and 34, drawn to a rod lens array, classified in class 359, subclass 619.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process. Specifically regarding claim 25, the rod lens of the claimed roughness can be made without the use of an aligning tool having a plurality of grooves to fix the rod lens into a unit.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the

Art Unit: 2873

product as claimed can be made by another and materially different process. Specifically the claimed rod lens array of the claimed roughness can be made without the use of an aligning tool having a plurality of grooves to fix the rod lens into a rod lens array.

Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claimed rod lens array does not require a single rod lens with the claimed roughness of claim 25. The subcombination, the rod lens, has separate utility such as being used as an internal examination imaging without being in an array.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for one group is not required for any other group, restriction for examination purposes as indicated is proper.

A telephone call was made to Michael Whitman on January 8, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
